

Data

John C. Hart

Department of Computer Science
University of Illinois at Urbana-Champaign

Data Visualization Framework

Data Layer

- Locating and obtaining data
- Importing data in proper format
- Relating data for proper correspondence
- Data analysis and aggregation

Mapping Layer

- Associating appropriate geometry with corresponding data channels
- Data analysis and algorithms (e.g. contouring)

Graphics Layer

- Conversion of geometry into displayable image
- Decorations
- Managing interaction

Data Types

Discrete

(no between values)

Continuous

(values between)

Ordered
(values are
comparable)

Ordinal,
e.g. size: S,M,L,XL,...
Quantitative,
e.g. counts: 1,2,3,...

Fields,
e.g. altitude,
temperature

Unordered
(values not
comparable)

Nominal,
e.g. shape: □○△
Categories,
e.g. nationality

Cyclic values,
e.g. directions, hues

Mapping Quantitative Values

- Position
- Length
- Angle/Slope
- Area
- Volume
- Color/Density

CLEVELAND, W. S., AND MCGILL, R. Graphical perception: Theory, experimentation and application to the development of graphical methods. Journal of the American Statistical Association, 79(387) 1984

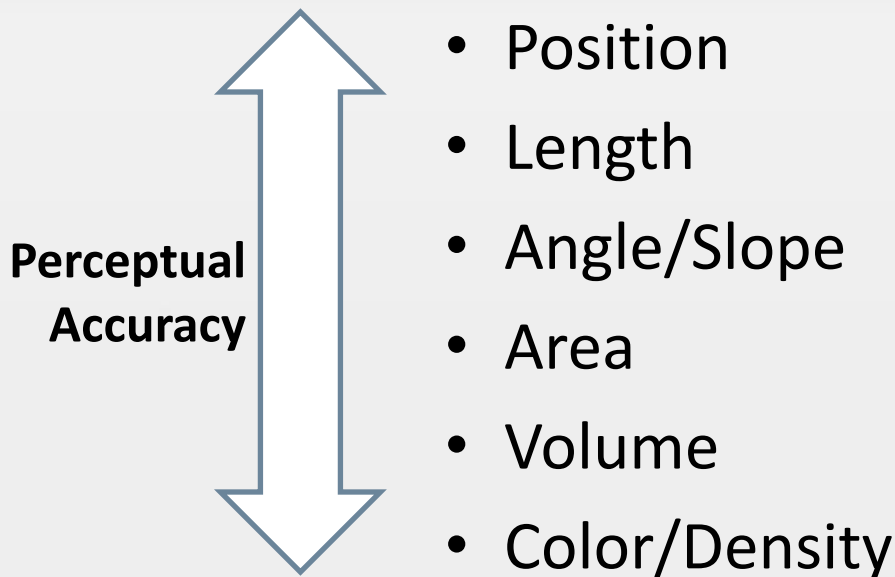

Mapping Quantitative Values

- Position
- Length
- Angle/Slope
- Area
- Volume
- Color/Density

Bar Chart

↑
Quantitative
dependent
variable
↓

← Discrete/nominal
independent variable →

Benefits from both
position (top of bar)
and length (size of bar)

Line Chart

↑
Quantitative
continuous
dependent
variable
↓

Benefits from
position but
not length

← Quantitative continuous
independent variable →

Scatter Plot

↑
Quantitative
independent
variable
↓

← Quantitative
independent variable →

Relies mostly
on position,
but clusters
also yield
density

Table

What to Use?

Dep.	Quantitative Continuous	Bar	Line
	Quantitative Discrete	Bar	Bar
Ind.	Quantitative Continuous	Gantt	Scatter
	Nominal or Q. Discrete	Table	Gantt
		Nominal or Q. Discrete	Quantitative Continuous
		Independent
